

From atheism, to faith and science

Ming Wang, MD, PhD

Harvard & MIT (MD, *magna cum laude*); PhD (laser physics)
Wang Vision 3D Cataract & LASIK Center

Founding president, Tennessee Chinese Chamber of Commerce
Co-founder, Tennessee Immigrant and Minority Business Group
Clinical professor of ophthalmology of University of TN
Wang Foundation for Christian Outreach to China
Wang Foundation for Sight Restoration

Atheism vs. faith

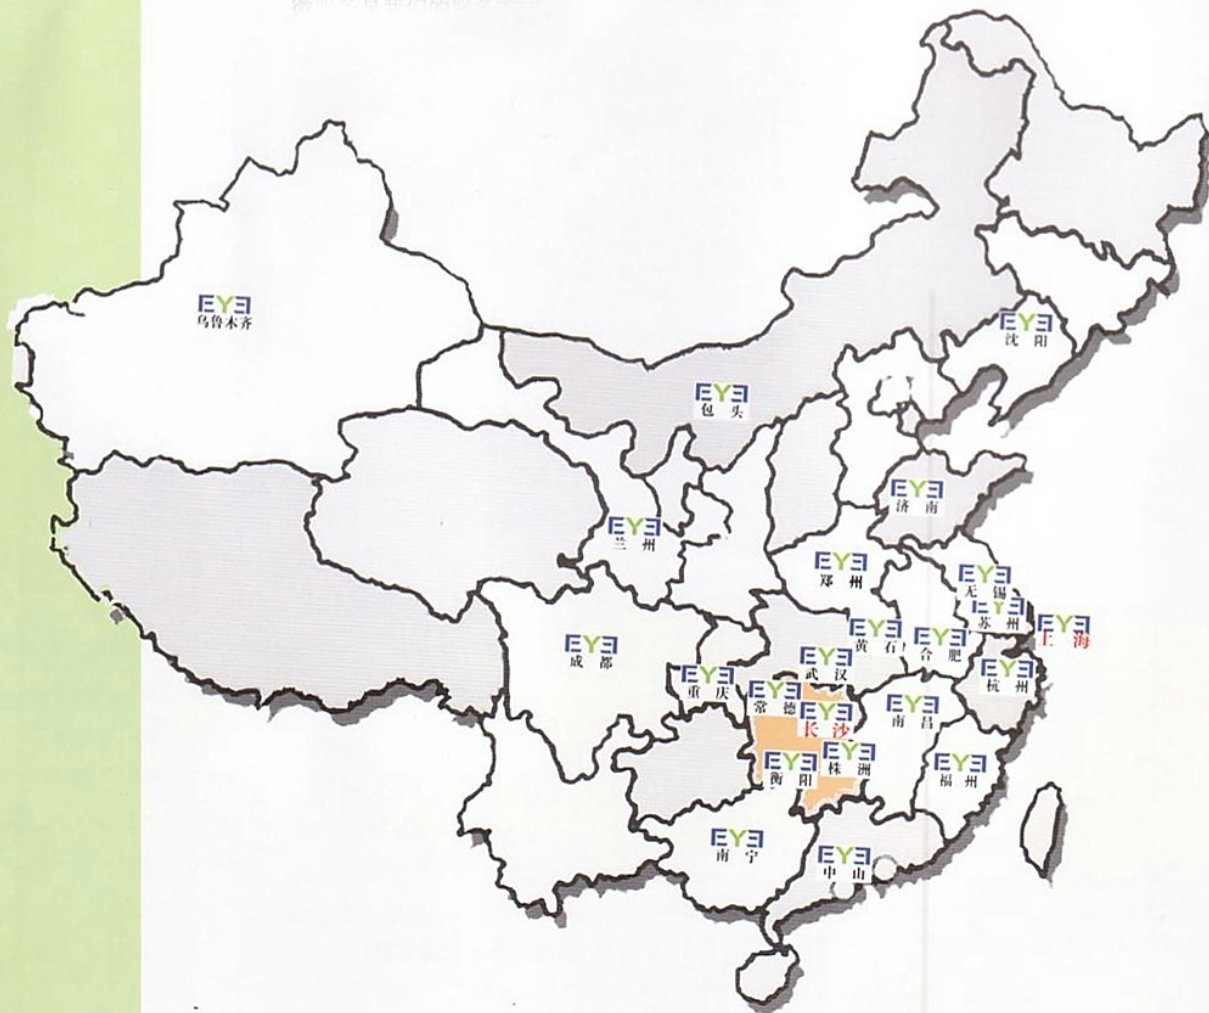

Human's struggle to understand atheism vs. faith

- Roger Penrose "The Emperor's New Cloth"
- Quantum mechanics and probabilities
- Creation vs. evolution
- Random collisions vs. intelligent design
- The age of universe and the time it would take for random collisions to form life
- Dark matter – 95% of the universe

A personal journey, from science, to
faith and science

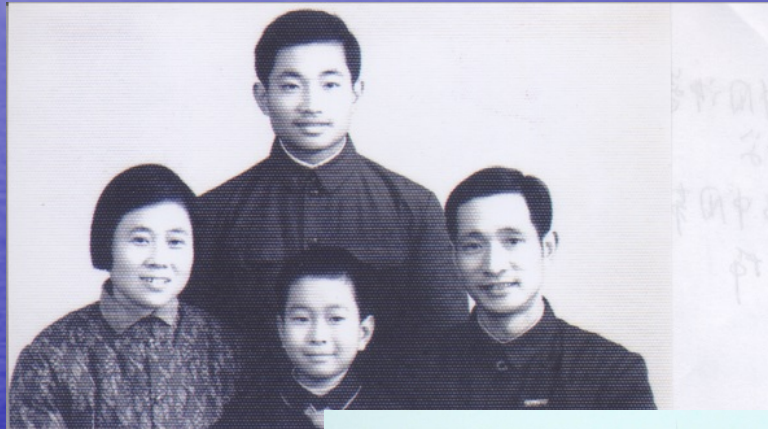

微服务是我们的服务方式

Growing up in China

Born as an atheist

Cultural Revolution (1966-1976)

Massive deportation of youth

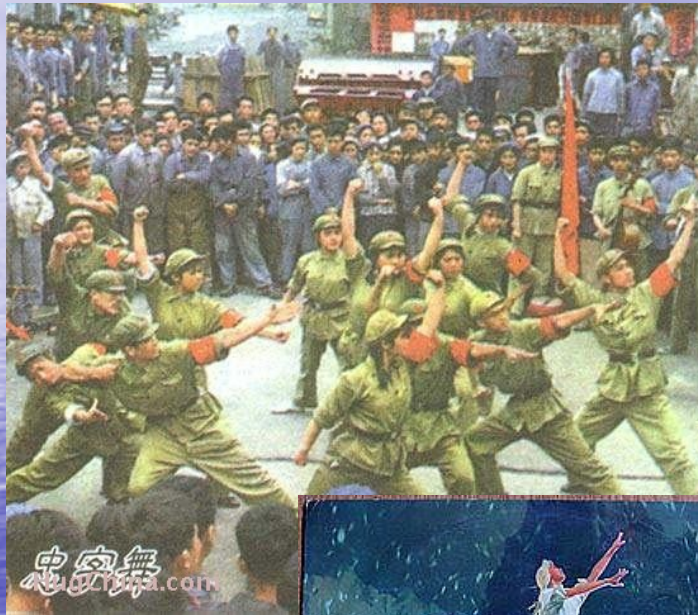

Condemned of a lifetime of poverty and hard labor

To escape deportation – learn to play er-hu

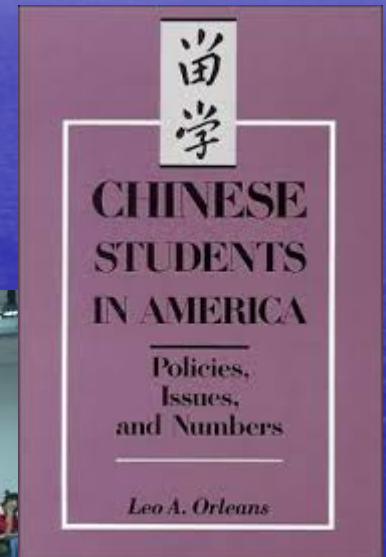

To escape deportation - learn to dance...

1976, an once-in-a-life-time chance

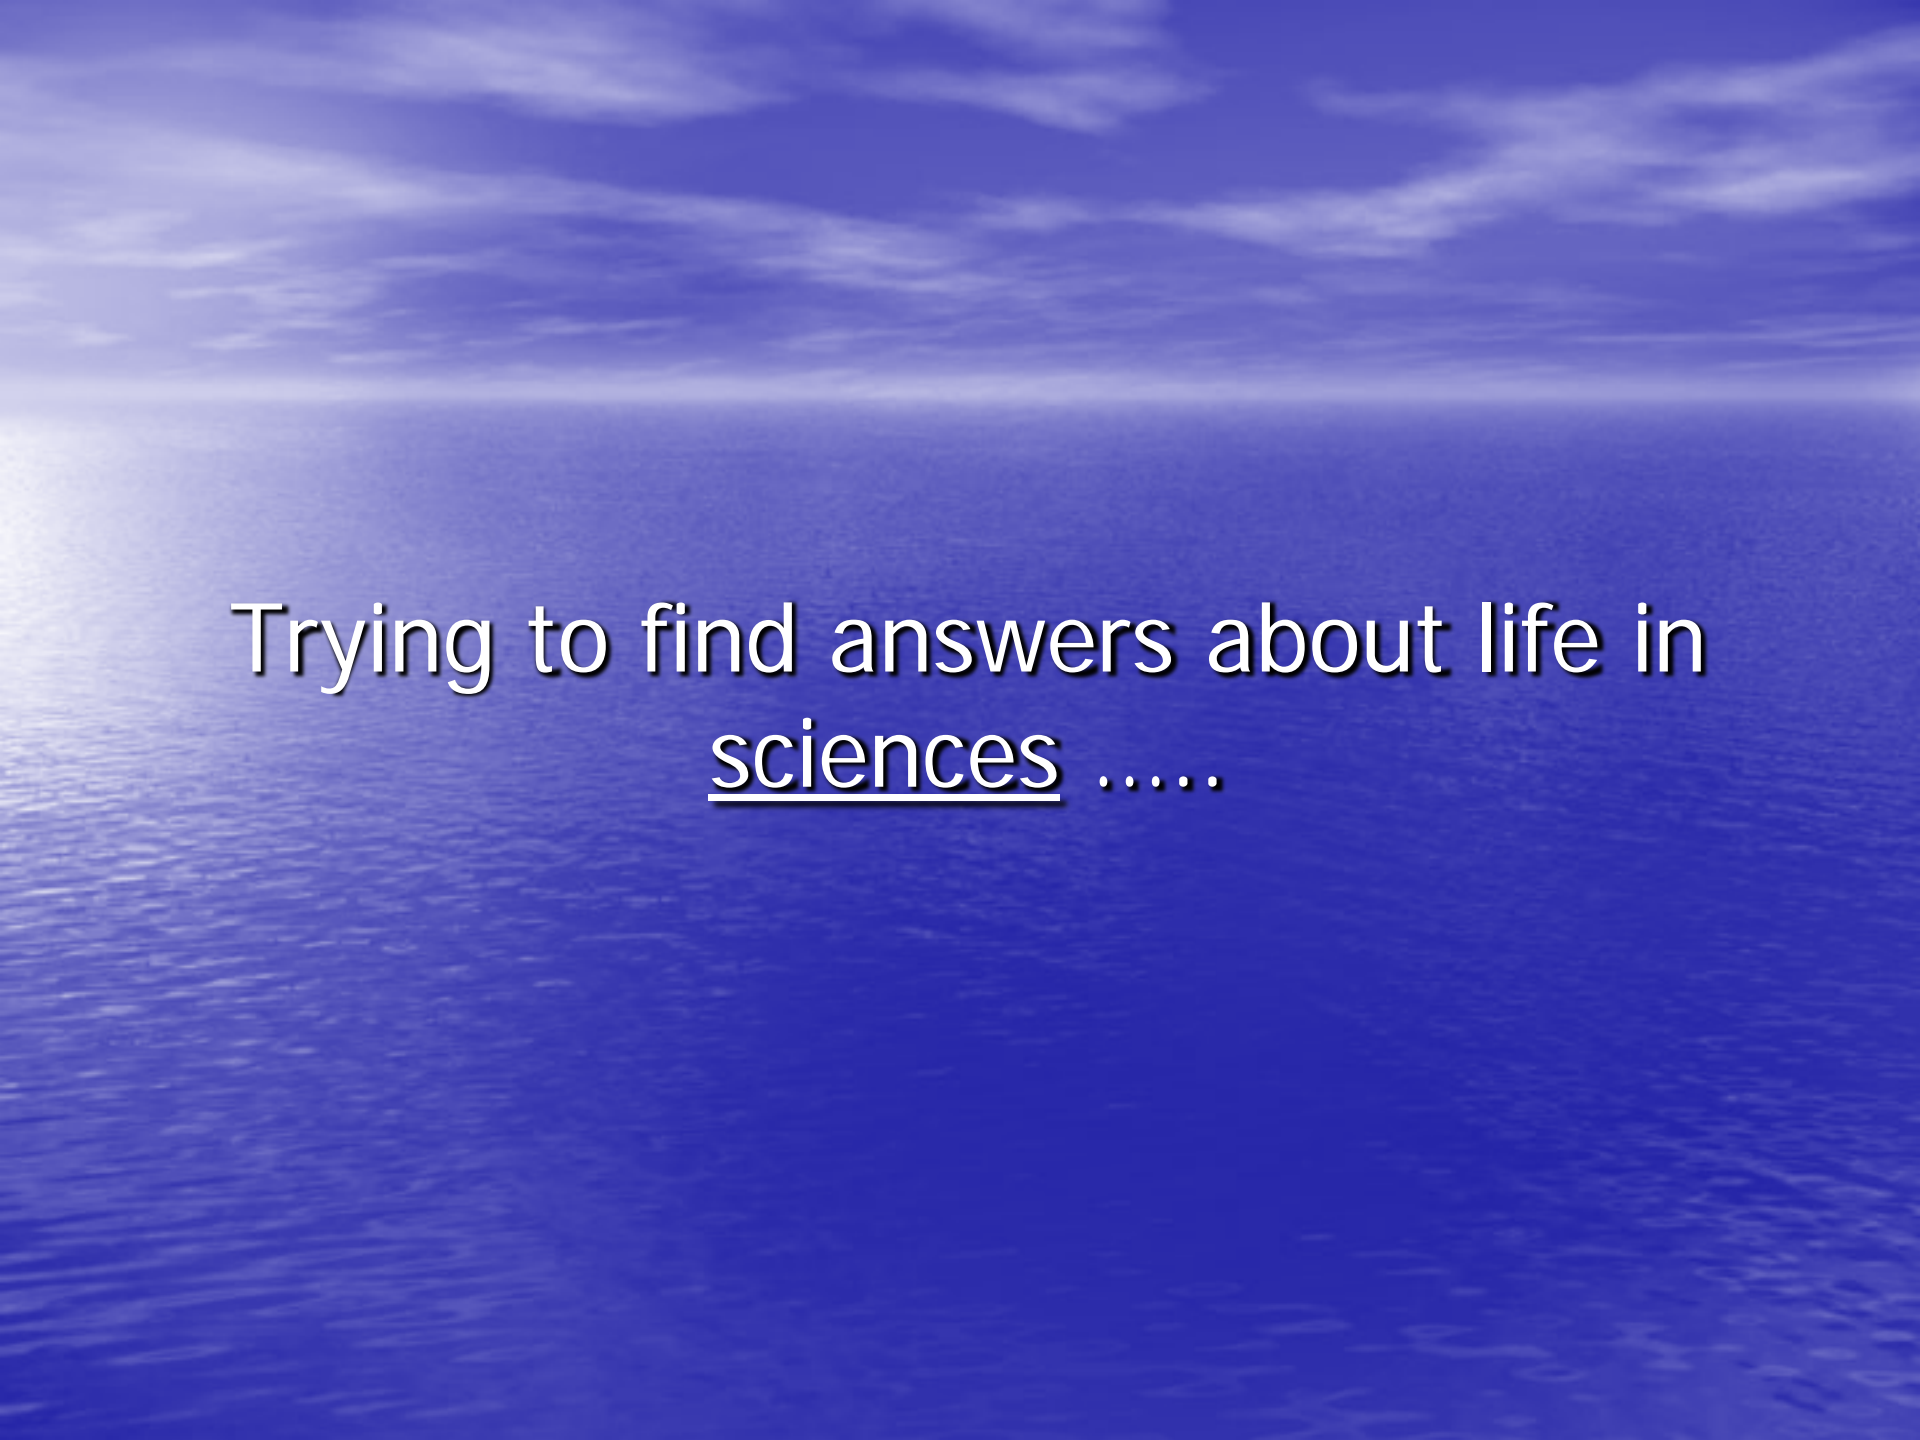

1982, with \$50, came to America...

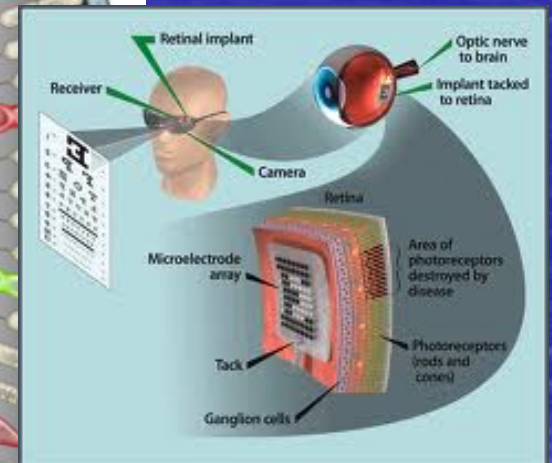

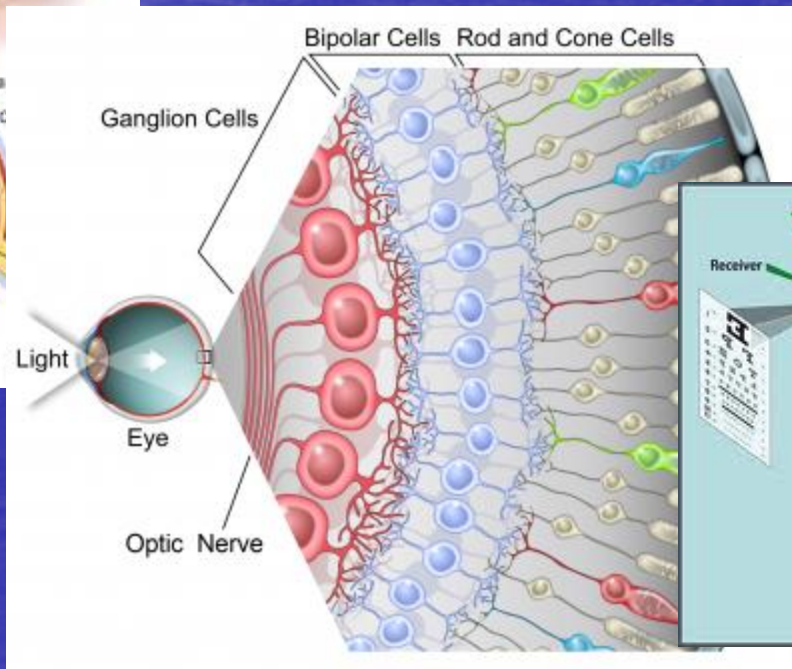

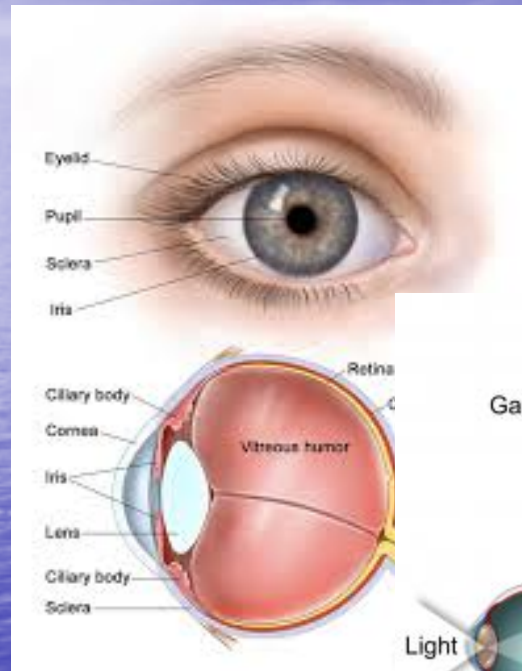

Harvard & MIT

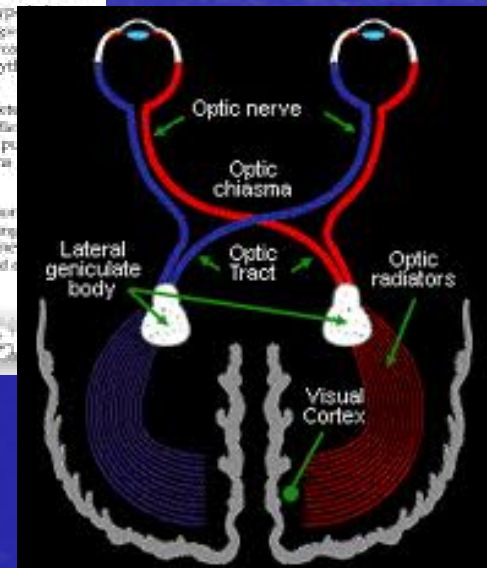

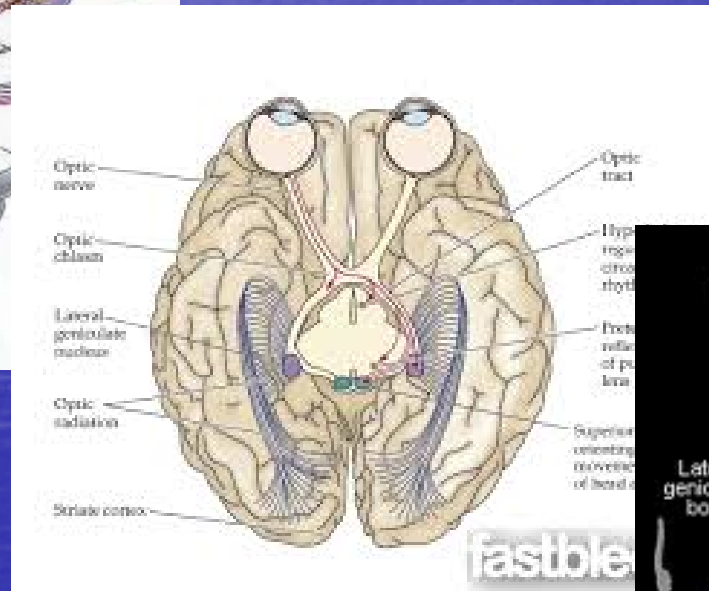

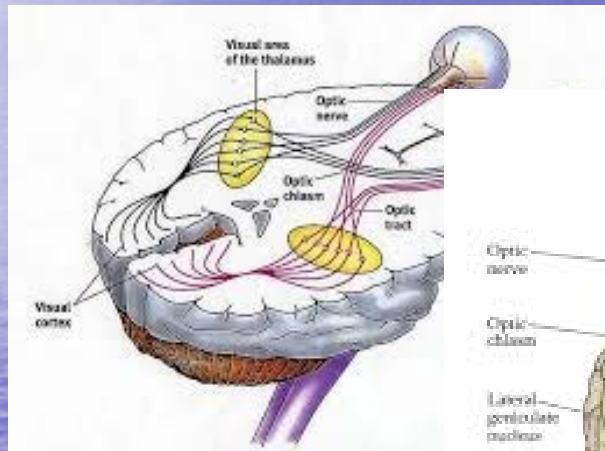

Trying to find answers about life in
sciences

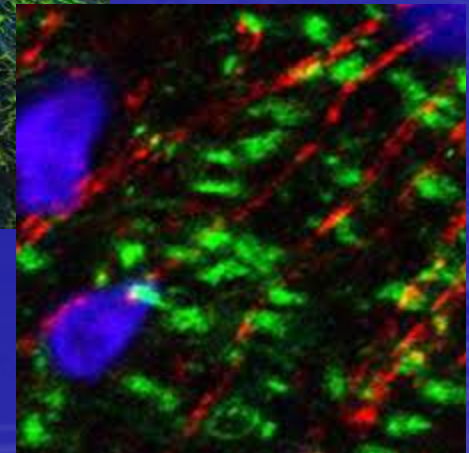

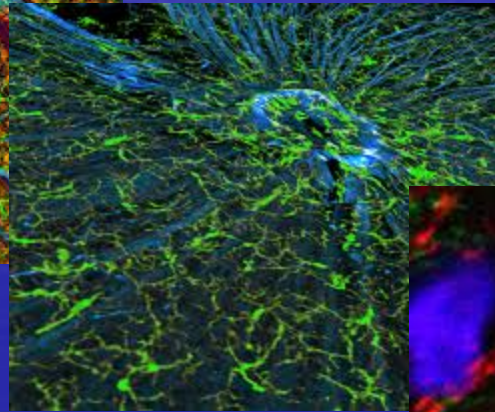

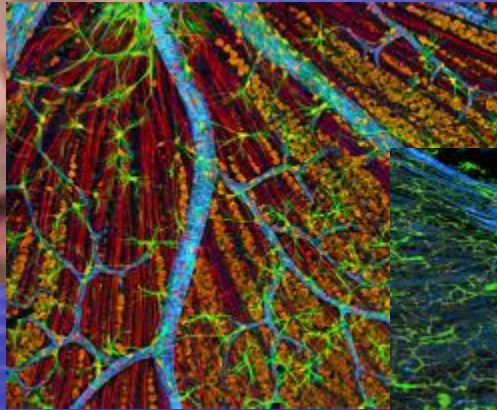

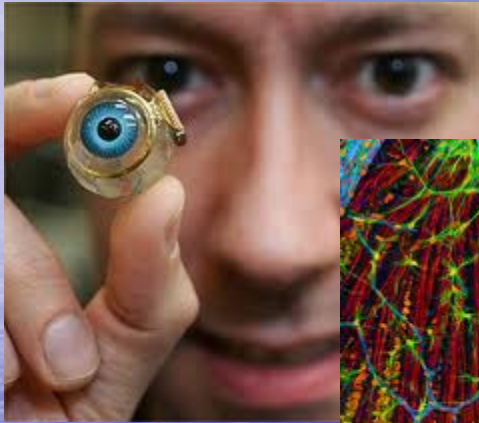

The human eye

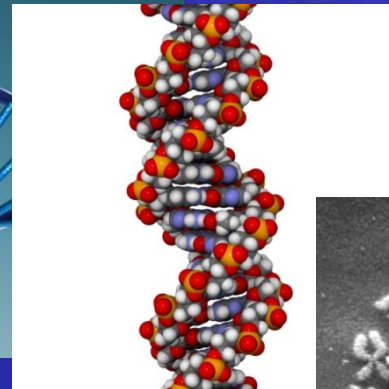

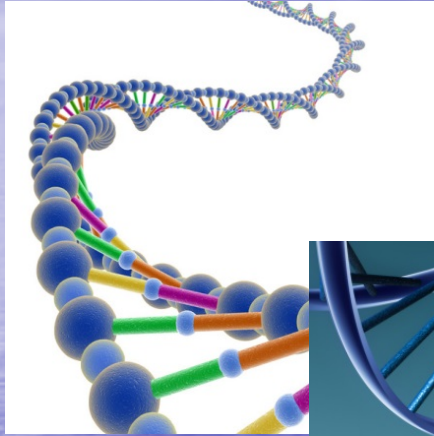

The eye and brain

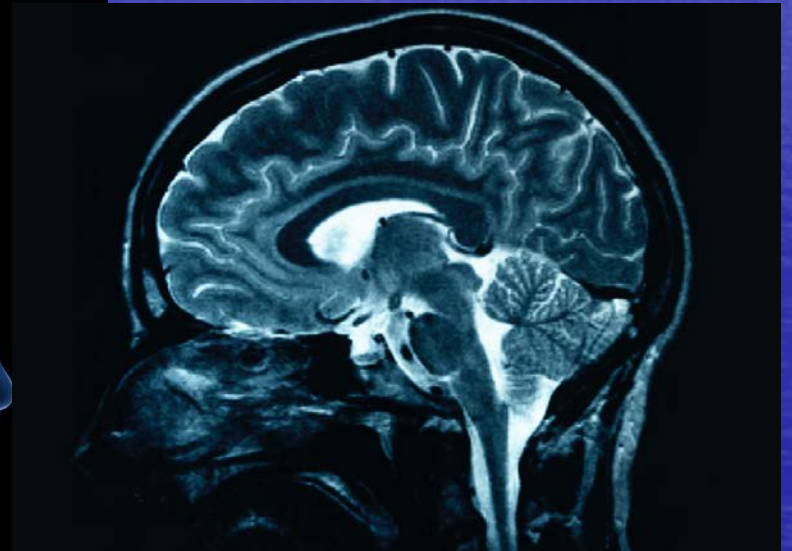

The neuronal connections

The DNA and genes

The human brain

Human's struggle to understand atheism vs. faith

- Roger Penrose "The Emperor's New Cloth"
- Quantum mechanics and probabilities
- Creation vs. evolution
- Random collisions vs. intelligent design
- The age of universe and the time it would take for random collisions to form life
- Dark matter – 95% of the universe

Universe is only 13 billion years old...

But the complexity of biological systems will have to take trillions of trillions of trillions years (10^{23} , Avogadro number, for example) if it had to be by chance, mathematically.

Science alone...

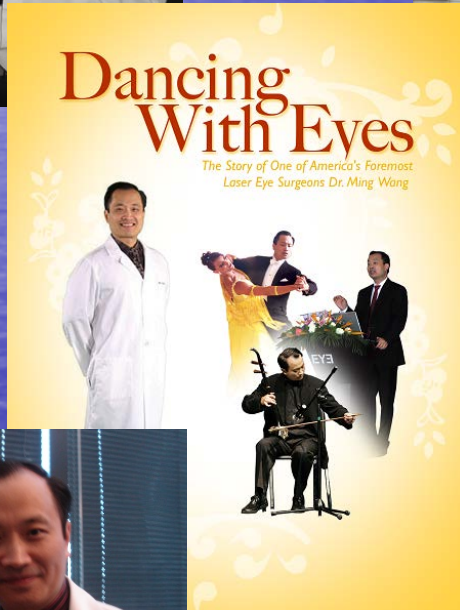

... in crisis

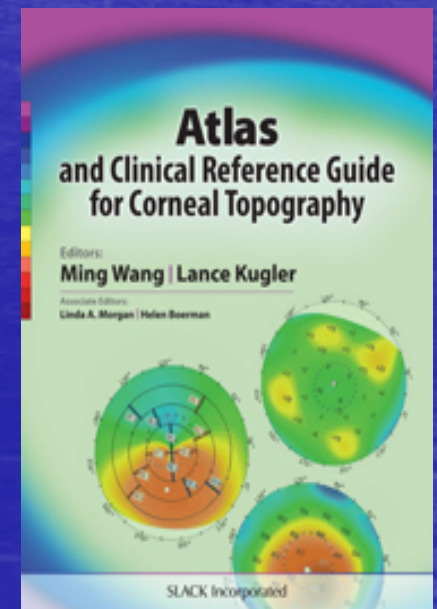

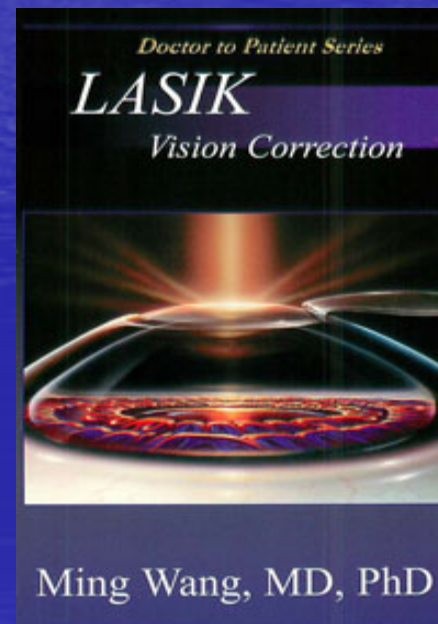

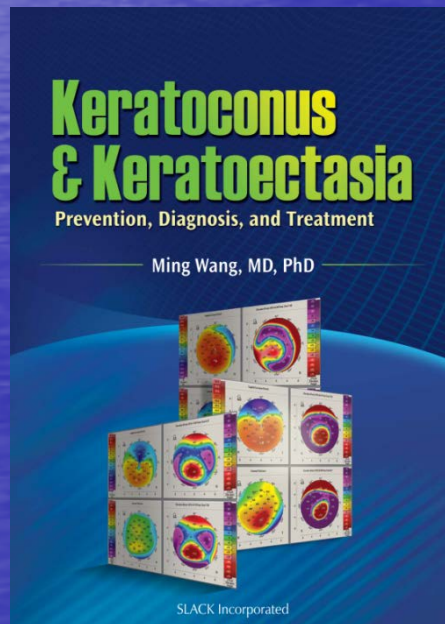

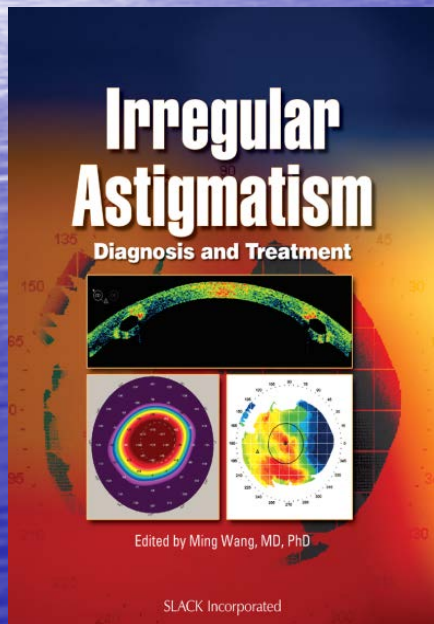

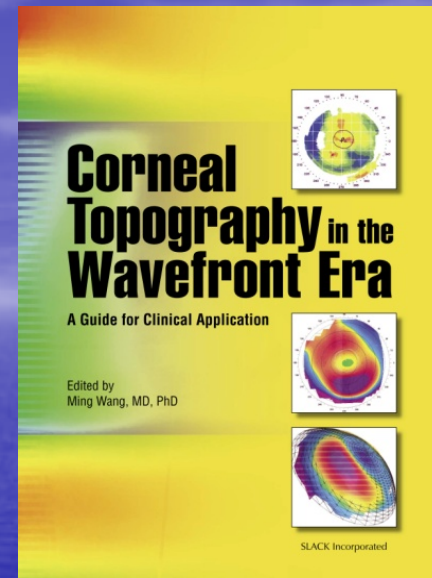

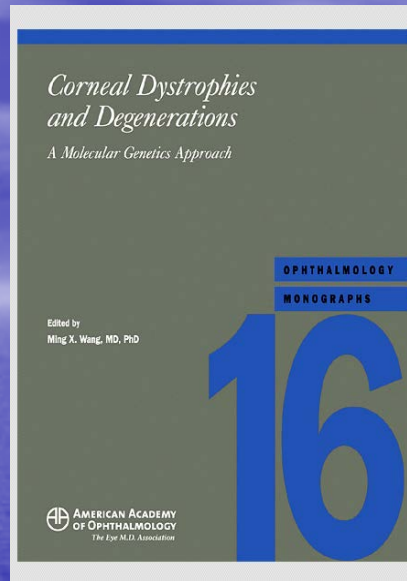

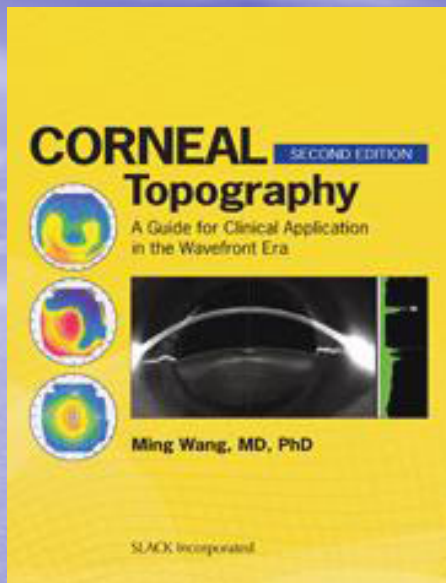

The story of a professor...

Christian faith provided the ultimate answers to life's questions

- God, you can't see or measure, but, you can feel and see the effect of HIS presence
- E.g., dark matter in physics

Work inspired and empowered by faith

A 3D **LASER** eye surgery specialist

18-60

3D LASIK

40-65

Who can enroll in the study?
If you have trouble reading without glasses and are between 40 and 60 years of age, you may be eligible to enroll in the study being conducted at this office. You are not eligible to enroll if you have had prior surgery on your eyes, such as cataract surgery, LASIK, PRK, or RK, or have a chronic disease. Enrolled patients must also be able to complete a written informed consent.

Some standard medical tests will be performed to assess your health, including a complete eye exam. You will not be charged for these tests. If you are determined to be eligible, you will be given the opportunity to receive the surgery. Patients will be monitored for up to 24 months after enrolling in the study.

If you are interested in enrolling, please speak to the physician or a staff member at this office.

This medical office is conducting a clinical research study to investigate a new surgical method to correct age-related loss of near vision (presbyopia).

If you are interested in participating in this study, please speak to the physician or a staff member here.

Do You Need Glasses to Read?

You could be a candidate for a clinical research study conducted at this medical office.

From Darkness to Sight

The New Chinese Bible Project

An once-in-a-lifetime opportunity to recruit a quarter of human race, into God's kingdom!

Faith and science, friends or
foes?

Science and faith, friends or foes?

- Do we conduct stem cell and fetal tissue research, harming the fetus, to benefit the adult?
- Or, do we NOT to do research, and thus stopping improving the quality of our lives?

Stem cell and fetal research, yes or no?

- What would *you* do?

Science and faith, friends or foes?

A 16-year journey...

Science and faith, friends or foes?

- God loves us so He DOES want us to do research, to improve the quality of our lives.
- But, He wants us to do it, in the *right way* (e.g., using amniotic membrane, without affecting the fetus).
- It is NOT going to be easy, the right way of doing things is often difficult.
